

THREAT TRACKER (T2)

Program Overview

April 2022

NSWC PANAMA CITY DIVISION

Expanding the Advantage through Collaboration

DISTRIBUTION A. Approved for public release: distribution unlimited.

Agenda

- Threat Tracker
 - Team
 - How it works
 - Features
 - Schedule
 - Way Forward

Distribution Statement A: Approved for public release; distribution is unlimited.

UAS Threats to the DoD

- Unmanned Aircraft Systems (UAS) pose a threat to DoD assets and facilities; the DoD seeks to detect, track, and identify these UAS to educate decisions for potential counter-measures
- Most systems under development that address this problem are bulky and have limited functionality
 - Must be static while operating
 - Specialized equipment or personnel needed to deploy and setup
 - Need infrastructure to operate
 - Only detects based off of RF signature
- Threat Tracker aims to address these limitations in a 2-man portable, small form factor solution

Who We Are

- Persistent Awareness Branch (E26) at the Naval Surface Warfare Center Panama City Division (NSWC PCD)
- Background in intrusion detection for DoD
- Perimeter protection
 - Video Analytics
 - Sensor fusion
- One full-time Technical Lead/Mechanical Engineer
- One full-time Software Engineer
- 3 quarter-time junior level Software support personnel (Software Engineer, Computer Engineer, and a Computer Scientist)

What is Threat Tracker?

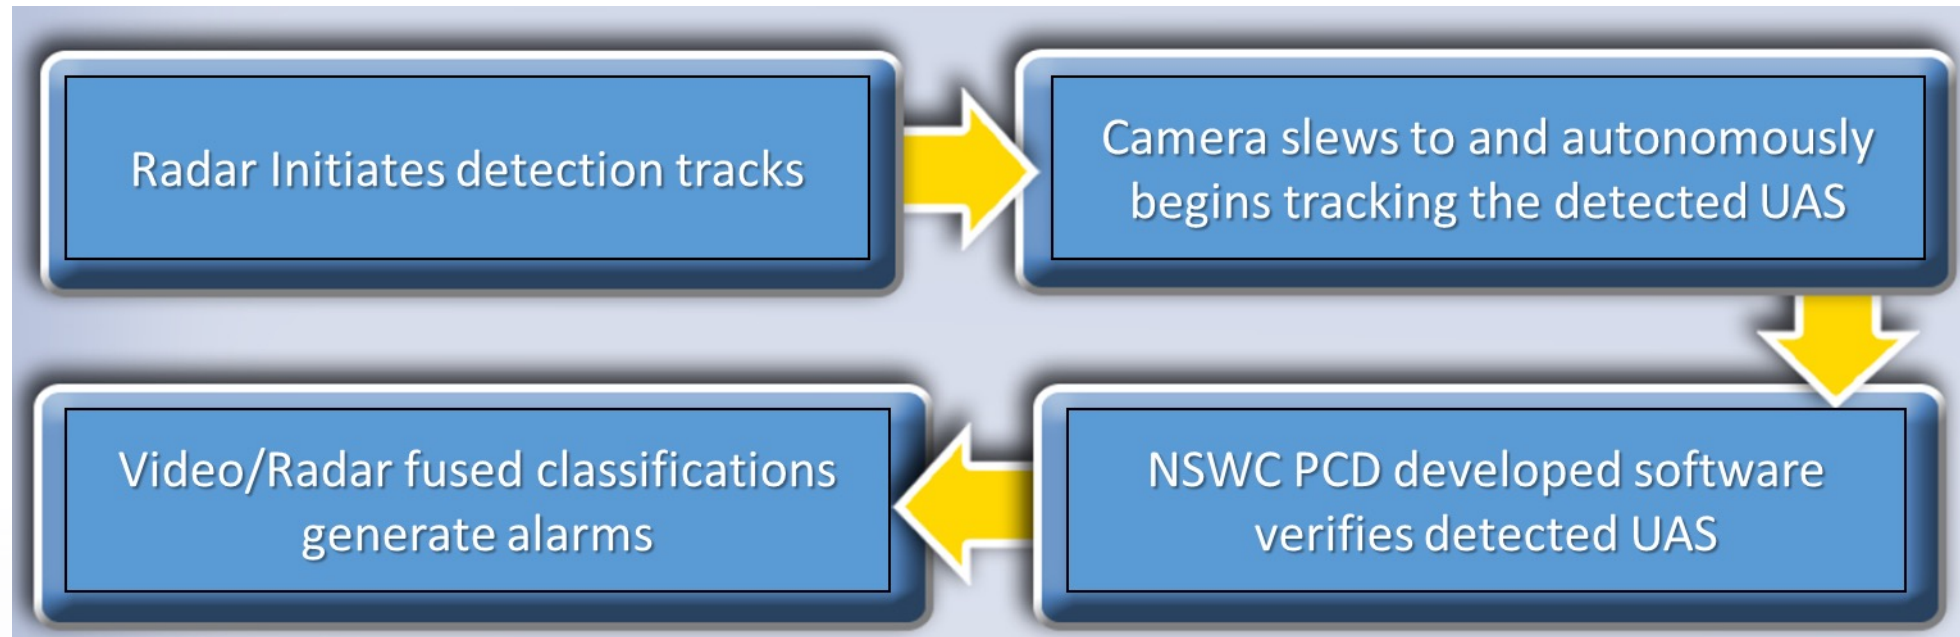

- Threat Tracker is:
 - Small form factor UAS detection system
 - For use in mobile or static environments
 - Detects, Tracks and accurately Classifies small UAS
 - No user input needed following initial setup.
 - Utilizes locally developed software incorporating the latest cutting edge techniques and sensor fusion to classify detections from radar data and computer vision technology

Distribution Statement A: Approved for public release; distribution is unlimited.

Target Acquisition & Identification Process

Distribution Statement A: Approved for public release; distribution is unlimited.

Portability

- The Threat Tracker system is 2-man portable.
 - Packs and stores in four Pelican cases.
 - Can be checked onto commercial flights.
 - Fits into the back of a minivan while retaining seating for 5.

Distribution Statement A: Approved for public release; distribution is unlimited.

Rapid Response

- T2 is set up and operational within minutes, not hours or days.
- T2 can be deployed on both static or moving platforms and retain all operational capabilities.

Distribution Statement A: Approved for public release; distribution is unlimited.

Autonomous UAS Detection

- Operators cannot remain focused on monitoring for drones like a persistent autonomous system
- UAS counter-measure decision-making timelines are seconds and any actions that need to be taken need must be done immediately and without hesitation
- The cost to staff a full time operator around the clock becomes unsustainable
- By removing the human from the loop, staff is available to perform other important tasking

Distribution Statement A: Approved for public release; distribution is unlimited.

Cybersecurity

- Continued system hardening against cybersecurity threats

Additional Sensor Integration

- Weatherize system
- Deployment/mounting options
- Power conditioning and backup
